

Full guide to Google OAuth verification

Open Google Cloud Platform at <https://console.cloud.google.com/> and log in using your account. After logging in click on the “Select a project” button (or it might show the name of your current project if you have any. Either way click on it).

In the popup that appears click on the “NEW PROJECT”

Enter a Project name. It doesn't really matter what the name is since this is not shown anywhere, but input something valid so you can find this project easier. Choose your corresponding Organization and Location. After that click on the “CREATE” button.

Project name *

Test Project

?

Project ID: unified-firefly-430312-q0. It cannot be changed later. [EDIT](#)

Organization *

bicomsystems.com

▼

?

Select an organization to attach it to a project. This selection can't be changed later.

Location *

 bicomsystems.com

BROWSE

Parent organization or folder

CREATE

CANCEL

You should soon see a notification in the top right saying your project is successfully created. Click on the item in the notification to open a newly created project or you can select the newly created project in white bar in project drop down menu.

Notifications

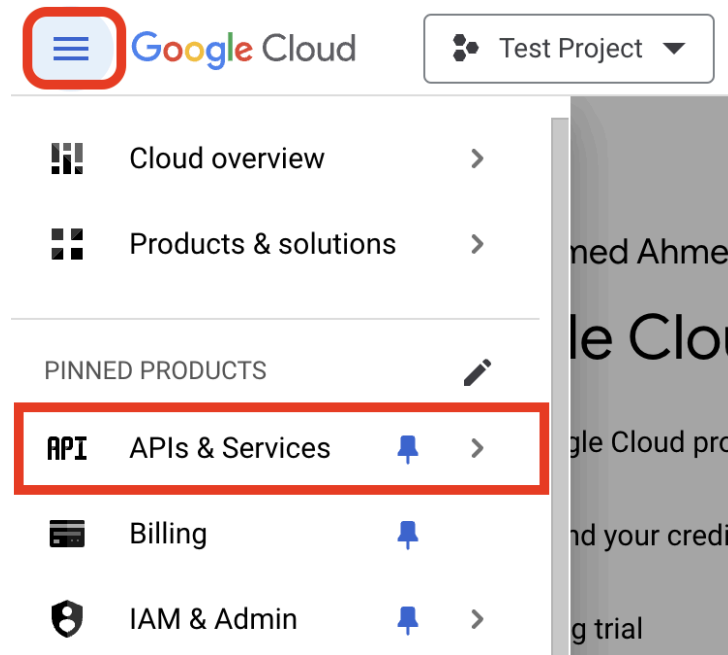

Create Project: Test Project

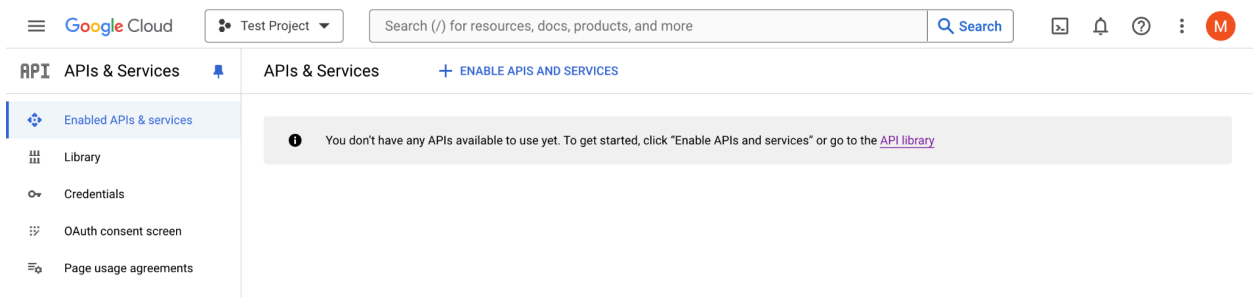

Just now

[SELECT PROJECT](#)

Verify that this is your currently selected project by looking at the project name in the white bar. Open burger menu on the left and click "APIs & Services"

Now you should see a screen like this:

Now click on the "OAuth consent screen" item on the left. Pick "External" and click "Create".

API APIs & Services

Enabled APIs & services

Library

Credentials

OAuth consent screen

Page usage agreements

OAuth consent screen

Choose how you want to configure and register your app, including your target users. You can only associate one app with your project.

User Type

☐ Internal

Only available to users within your organization. You will not need to submit your app for verification. [Learn more about user type](#)

☒ External

Available to any test user with a Google Account. Your app will start in testing mode and will only be available to users you add to the list of test users. Once your app is ready to push to production, you may need to verify your app. [Learn more about user type](#)

CREATE

In the newly opened screen, enter the Application name and your User support email. This application name is shown to the end-users and is also used by Google to verify the connection between this Google project and the Desktop application. So the name should be “<DESKTOP_APP_NAME> Contacts” (e.g. S-Net Connect Contacts, CallSwitch Contacts etc.).

Google Cloud

DELETE

RESTORE DELETED CRE

Create credentials to access your project

Remember to

API Keys

No API keys to display

API key

Identifies your project using a simple API key to check quota and access

OAuth client ID

Requests user consent so your app can access the user's data

Service account

Enables server-to-server, app-level authentication using robot accounts

Help me choose

Asks a few questions to help you decide which type of credential to use

Pick “Desktop app” for the Application type and insert a name. The name here is not important so you can just type in “Native Client 1”. Click “Create” to proceed.

Create OAuth client ID

A client ID is used to identify a single app to Google's OAuth servers. If your app runs on multiple platforms, each will need its own client ID. See [Setting up OAuth 2.0](#) for more information. [Learn more](#) about OAuth client types.

Application type *

Desktop app ▼

Name *

Native client 1

The name of your OAuth 2.0 client. This name is only used to identify the client in the console and will not be shown to end users.

Note: It may take 5 minutes to a few hours for settings to take effect

CREATE

CANCEL

You should now see a confirmation that OAuth client has been created. Copy "Client ID" and "Client secret" and send it to us. We need to have these in order to link your desktop application with this Google Cloud Platform project. So please, send these right away. Press OK to proceed.

OAuth client created

The client ID and secret can always be accessed from Credentials in APIs & Services

OAuth access is restricted to the [test users](#) listed on your [OAuth consent screen](#)

Client ID

[REDACTED]
[REDACTED]
s.googleusercontent.com

Client secret

[REDACTED]

A red rectangular button with a blue pencil icon and the text "EDIT APP" in blue capital letters.

Publishing status 

Testing

PUBLISH APP

Scroll down and under “App domain” section add the following:

- Authorized Domain
- Application Homepage url
- Application Privacy Policy url

Homepage url should lead to the **Desktop** application of your brand.

App domain

To protect you and your users, Google only allows apps using OAuth to use Authorized Domains. The following information will be shown to your users on the consent screen.

Application home page

<https://www.testdomain.com/testapp>

Provide users a link to your home page

Application privacy policy link

<https://www.testdomain.com/privacy>

Provide users a link to your public privacy policy

Application terms of service link

[https://\[or\]http://](https://[or]http://)

Provide users a link to your public terms of service

Authorized domains

When a domain is used on the consent screen or in an OAuth client's configuration, it must be pre-registered here. If your app needs to go through verification, please go to the [Google Search Console](#) to check if your domains are authorized. [Learn more](#)  about the authorized domain limit.

Authorized domain 1 *

testdomain.com

Scroll to the end of the section and click "SAVE AND CONTINUE".

SAVE AND CONTINUE

CANCEL

Scopes section will be displayed. Click on "ADD OR REMOVE SCOPES"

Scopes express the permissions you request users to authorize for your app and allow your project to access specific types of private user data from their Google Account. [Learn more](#) 

[ADD OR REMOVE SCOPES](#)

Scroll down until you get to People API and check the box next to the item with scope `../auth/contacts`.

 Only scopes for enabled APIs are listed below. To add a missing scope to this screen, find and enable the API in the [Google API Library](#) or use the Pasted Scopes text box below. Refresh the page to see any new APIs you enable from the Library.

Filter Enter property name or value 				
 	API 	Scope	User-facing description	
☐			openid	Associate you with your personal info on Google
☒		People API	../auth/contacts	See, edit, download, and permanently delete your contacts
☐		People API	../auth/contacts.readonly	See and download your contacts
☐		People API	../auth/contacts.other.readonly	See and download contact info automatically saved in your "Other contacts"
☐		People API	../auth/directory.readonly	See and download your organization's GSuite directory
☐		People API	../auth/profile.age.range.read	See your age group
☐		People API	../auth/profile.emails.read	See and download all of your Google Account email addresses
☐		People API	../auth/profile.language.read	See your language preferences
☐		People API	../auth/user.addresses.read	View your street addresses

Scroll down and press “UPDATE” to proceed.

Rows per page: 20 ▼ 1 – 16 of 16 < >

Manually add scopes

If the scopes you would like to add do not appear in the table above, you can enter them here. Each scope should be on a new line or separated by commas. Please provide the full scope string (beginning with "https://"). When you are finished, click "Add to table".

ADD TO TABLE

UPDATE

Now you can see the newly added scope in the sensitive scopes table.

Your sensitive scopes

Approval required. 

	API 	Scope	User-facing description	
	People API	.. ./auth/contacts	See, edit, download, and permanently delete your contacts	

Scroll down and press “SAVE AND CONTINUE”.

SAVE AND CONTINUE

CANCEL

Repeat the last step. Now you can see “Summary” page. There you can check if all informations are correctly written.

Now you need to verify your domain. In order to do so, navigate to <https://www.google.com/webmasters/tools/home>

Make sure you log in using the same account that was used up until now. If the same account is not selected, verification won't be valid. Enter your domain and click "CONTINUE".

Welcome to Google Search Console

To start, select property type

Domain new

- All URLs across all subdomains (m., www. ...)
- All URLs across https or http
- Requires DNS verification

or

URL prefix

- Only URLs under entered address
- Only URLs under specified protocol
- Allows multiple verification methods

testdomain.com

Enter domain or subdomain

CONTINUE

https://www.example.com

Enter URL

CONTINUE

[Already started? finish verification](#)

Now you should see a verify domain popup. Follow the instructions from Google and modify your DNS accordingly. It is just a matter of adding a TXT record into the DNS configuration so Google can confirm you really own the entered domain. Note that DNS changes may take some time, so you probably won't be able to verify right away.

Verify domain ownership via DNS record

testdomain.com

Instructions for: **Any DNS provider** ▼

1. Sign in to your domain name provider (e.g. godaddy.com or namecheap.com)
2. Copy the TXT record below into the DNS configuration for **testdomain.com**

google-site-verification=cXr_hpRX9xQeU9qdEOj4RECB5mQYRopwRDg_xLg_y14

COPY

3. Press **verify** below

Note: DNS changes may take some time to apply. If Search Console doesn't find the record immediately, wait a day and then try to verify again

[Full details](#)

Can't verify via Domain name provider?

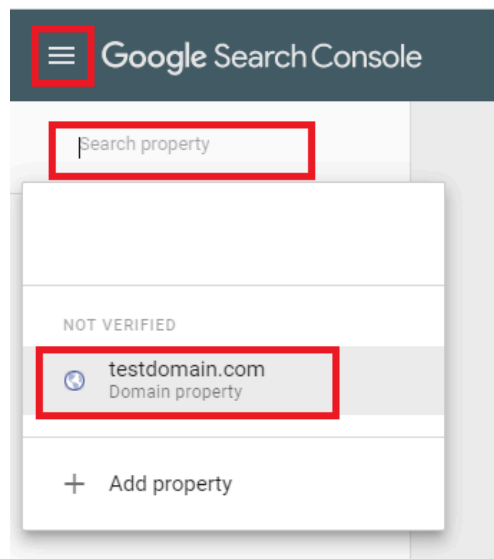

For more verification methods, [try a URL prefix property instead](#)

REMOVE PROPERTY

VERIFY LATER

VERIFY

After you have confirmed that the DNS records are updated and refreshed you need to come back to the screen above. If you have closed this dialog, you can always come back to it, just open the burger menu, click on the “Search property” and click on your domain.

This should open the same popup as before, and now you should click “VERIFY”. If your DNS is correctly set, the verification should pass.

Verify domain ownership via DNS record

testdomain.com

Instructions for: **Any DNS provider** ▼

1. Sign in to your domain name provider (e.g. godaddy.com or namecheap.com)
2. Copy the TXT record below into the DNS configuration for **testdomain.com**

google-site-verification=cXr_hpRX9xQeU9qdEOj4RECB5mQYRopwRDg_xLg_y14

COPY

3. Press **verify** below

Note: DNS changes may take some time to apply. If Search Console doesn't find the record immediately, wait a day and then try to verify again

[Full details](#)

Can't verify via Domain name provider?

For more verification methods, [try a URL prefix property instead](#)

REMOVE PROPERTY

VERIFY LATER

VERIFY

Do not proceed with the following steps until:

- **Domain verification is finished**
- **We have provided you with the demo video that you should upload to your YouTube account as unlisted**

After the domain verification is done, you are ready to submit Google Cloud Platform project for verification. So navigate back to OAuth Consent Screen, there you can find "Publishing status" section, click "PUBLISH APP".

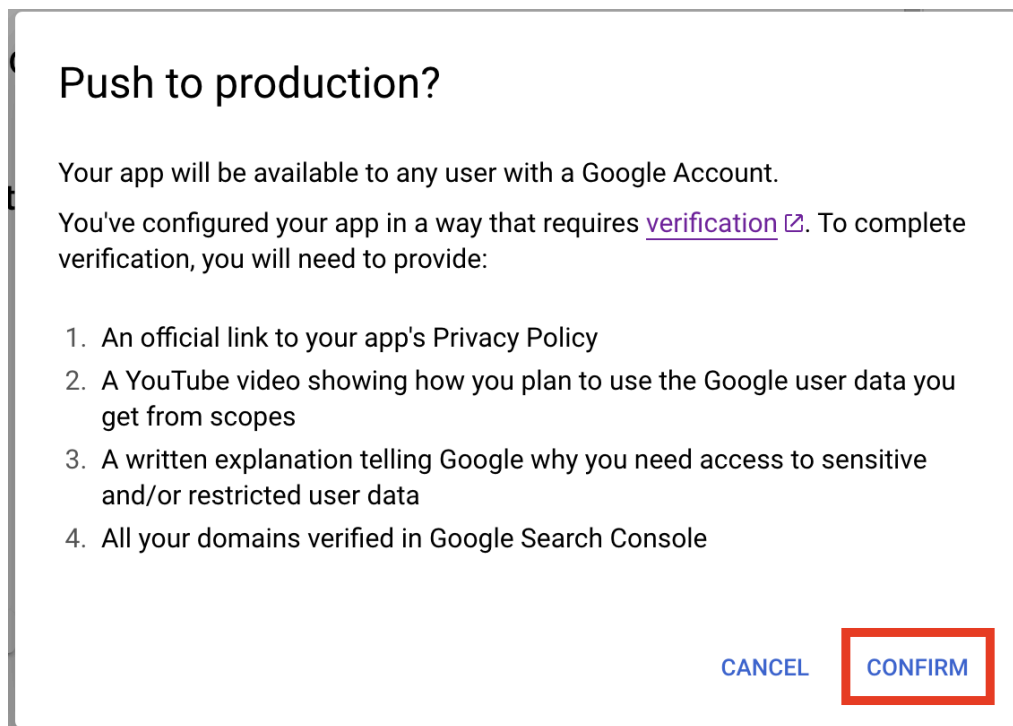

App Contacts [EDIT APP](#)

Publishing status

Testing

PUBLISH APP

In the popup window “Push to production?” click the “CONFIRM” button.

Now you should see this sensitive scopes warning. Once your app is published to production, click “Prepare for Verification” to proceed to submit your app for verification.

App Contacts [EDIT APP](#)

Verification Status

Needs verification

Because you're using one or more sensitive scopes, your app registration requires verification by Google. Please prepare your app to submit for verification. [Learn more](#)

[PREPARE FOR VERIFICATION](#)

Publishing status

In the next page you will be presented with all the information you have configured for your app. Read through all details to make sure all details are correct and up-to-date, then click “Save and Continue”

SAVE AND CONTINUE

CANCEL

Scroll down till the “Your sensitive scopes” section. Because we are using a sensitive scope we must write short text explaining how we will use the scope. So please copy the content colored blue below and paste it into the Scopes justification field:

My app will use <https://www.googleapis.com/auth/contacts> to show a user's contacts data on the screen of my app, so that users can call their Google contacts through my app and also add a new Google contact through the app if they want to. Read-only access to contacts is not sufficient since users need to have the ability to add new contacts through my app.

For each contacts the application reads:

- their full name - to be able to show it in the list of contacts
- their email - in order to enable users to send an email to the contact using a default email app on the computer (through mailto protocol)
- their phone numbers - in order to call them through the app

🔒 Your sensitive scopes

Approval required. ?

●	API ↑	Scope	User-facing description	
⚠️	People API	.. ./auth/contacts	See, edit, download, and permanently delete your contacts	🗑️

How will the scopes be used?

Enter justification here

My app will use <https://www.googleapis.com/auth/contacts> to show a user's contacts data on the screen of my app, so that users can call their Google

Explain to Google why you need these scopes, how you will use them, and why more limited scopes aren't sufficient. 668 / 1000

Proceed to scroll down till "Demo video: how will the scopes be used?" and insert the link to a youtube video we have provided after you provided us with credentials mentioned [here](#). Then click "SAVE AND CONTINUE".

Demo video: how will the scopes will be used? ?

YouTube link *

<https://youtube.com/someYoutubeUrl>

Provide a YouTube video demonstrating how you'll use the data from these scopes in your app. Your video must include all OAuth clients that you assigned to this project.

SAVE AND CONTINUE

CANCEL

Scroll down and click "SAVE AND CONTINUE".

SAVE AND CONTINUE

CANCEL

Scroll down and check “My usage of OAuth Scopes complies with the...” checkbox then click “SUBMIT FOR VERIFICATION”

☒ My usage of OAuth Scopes complies with the [Google API Services: User Data Policy](#). 

BACK TO DASHBOARD

SUBMIT FOR VERIFICATION

After submitting for verification you need to wait for a response from Google. So make sure to check your emails on the account used to create and manage this project.

If everything goes well you will receive an email in the next few days confirming the project is verified.

! Your Google Cloud Project [REDACTED]

Request Granted

Dear Developer,

Thank you for submitting a verification request.

Your OAuth App Verification request for project [REDACTED] has been approved for the following scopes:

- <https://www.googleapis.com/auth/contacts>

You can check the latest status of your review request on the OAuth Consent Screen page in [Google Cloud Console](#) for this project.

Please note that certain *new* changes made to the Consent Screen post this approval may require you to submit a review request again. These new changes include brand information related changes and access to unverified scopes.

For example, if the OAuth scopes used by your project are **not exactly the same** as those marked as approved on the OAuth Consent Screen page in [Google Cloud Console](#), your project may present the [unverified app screen](#). It's recommended to **select all the OAuth scopes used by your project** when you submit the review request. You can add scopes to your OAuth consent screen configuration page by going through steps listed below:

If you open your Google Cloud Platform project you should now see it as verified.
